# Come Fly With Us!

Introducing the MSLR Electric E-Foil Series! E-Foil technology uses an advanced lithium-ion battery to power a whisper quiet electric motor mounted on an all-carbon fibre hydrofoil.

The MSLR E-Foil is controlled by a waterproof wireless bluetooth controller and can reach speeds of up to 30 KPH. It's an eco friendly FLIGHT experience - an incredible feeling that everyone should - and can - experience.

The MSLR E-Foil is built from composite and carbon fibre to achieve maximum strength and durability. Inside the MSLR E-Foil is an IP68 certified waterproof battery box which also contains the electronics. Who can use the MSLR E-Foil? Our products are designed for anyone from young kids to adults. Our E-foils are super easy to ride/fly. You will be enjoying an incredible experience with in minutes. Riding an MSLR E-Foil is an experience like no other. It's a feeling of stoke. After your session you are left with a feeling that is unexplainable...

The battery is a Samsung 224 cell unit, with temperature control and voltage sensors. Its 40 Amp hours provide the engine with ninety minutes of operation in Eco mode - and 70 minutes in Sport mode.

The battery is encapsulated inside a complete waterproof carbon fibre box with IP68 certification.

The Mast is designed in a single piece from pure high density 3k carbon fiber.

The Mast is available in two sizes 90 cm and 70 cm version.

The engine has been designed to respond efficiently to the needs of the user, transmitting smooth and adapted power. Its 3500 watts of power are controlled by remote control. It has two unique driving modes: Sport and Eco. The motor's small dimension minimizes resistance and takes advantage of kinetic energy when decreasing the power. The aluminum propeller provides maximum thrust, and is safety protected to avoid contact.

The MSLR Waterproof Bluetooth 2.4g Remote Control is very easy to use and features Battery Display, Cruise Control setting and Wireless Charging Functions

Waterproof Lithium Battery

Constructed with 3k Carbon Fibre

60 Minutes of Epic Flight Time

Weight 16 KG

Comes in 2 different sizes 6'5 and 5'5

Carbon Composite Battery Space

PVC Reinforce For Foil Mount Area

EVA Grip Pad

EPS Foam Core

Mast Available in 90 cm and 70 cm

Aluminum Propeller

Rear Stabilizer Wing

Fuselage

Front Carbon Fiber Wing

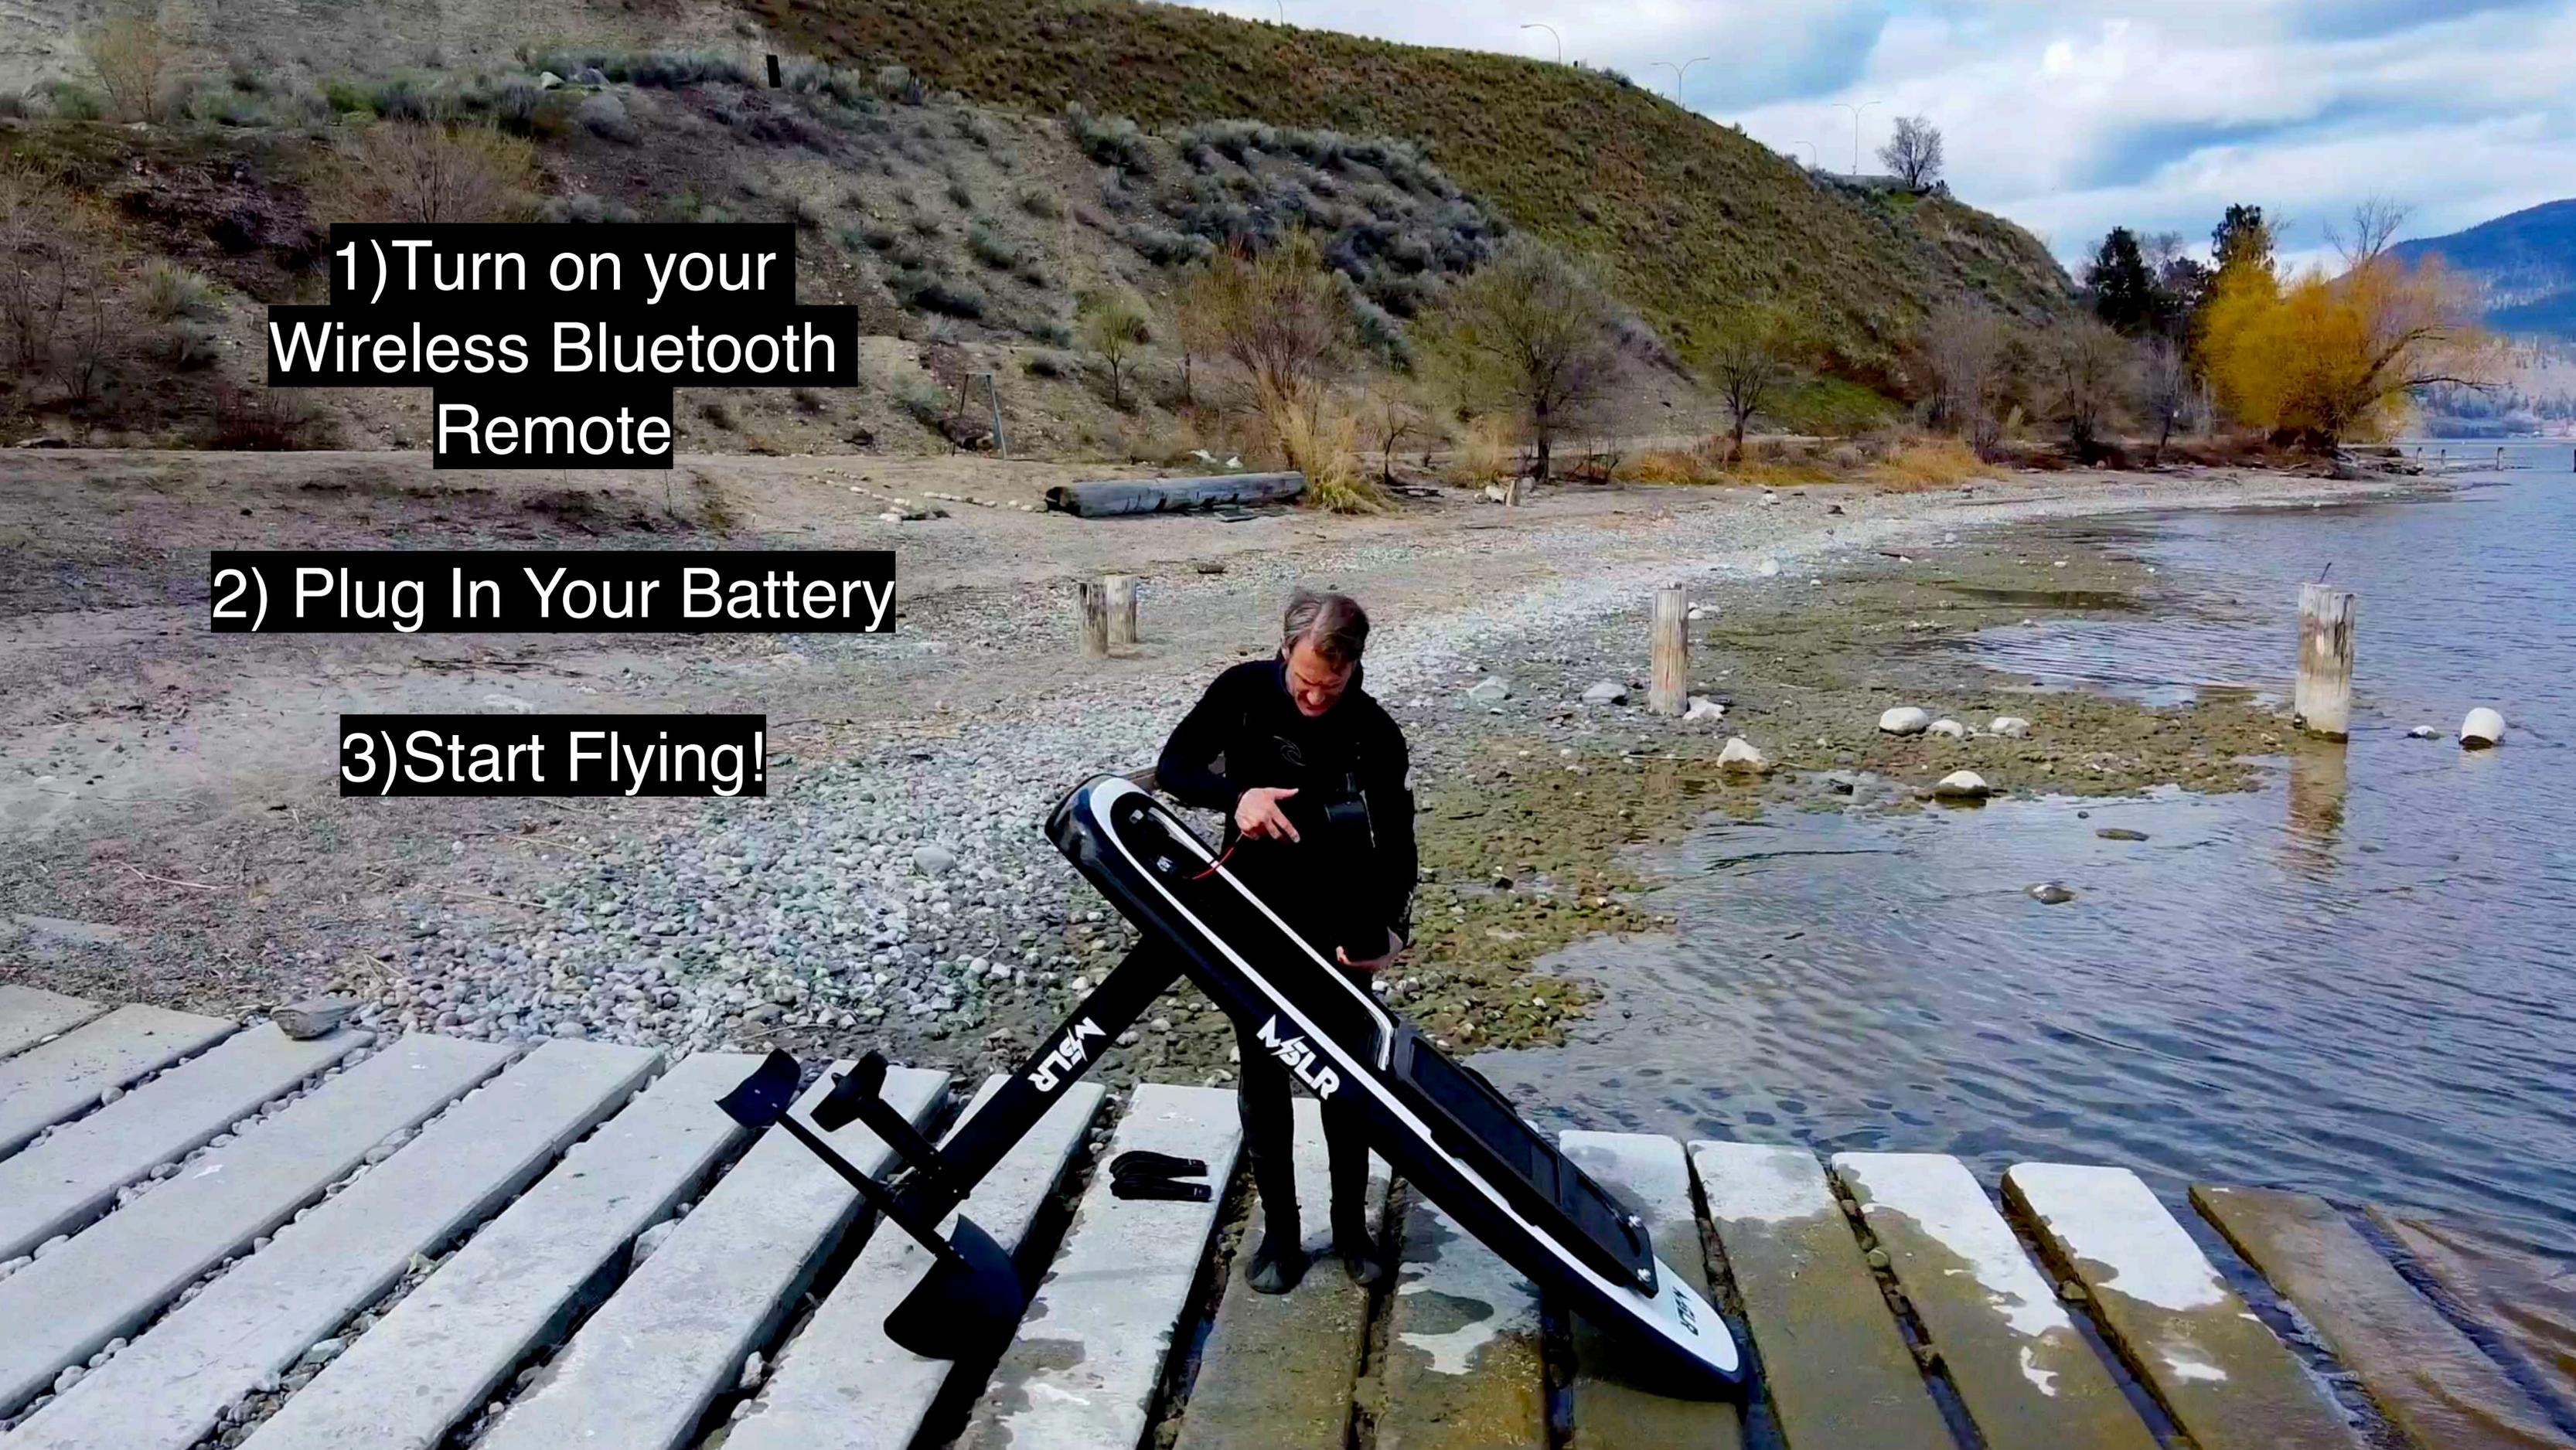

Each MSLR E-Foil Board  
Comes with a High end  
Surf Protection Bag,  
Travel Bag &  
Foil Protection Cover and  
Stabilizer Cover

1) Turn on your
